

Windows 11 Virtual Machine Deployment Lab

Objective:

The purpose of this lab was to install and configure Microsoft Windows 11 within Oracle VirtualBox. This project was completed to gain hands-on experience with virtualization technologies, operating system deployment, system verification, and basic networking.

Tools Used

- * Oracle VirtualBox
- * Microsoft Windows 11 ISO
- * Windows 11 Host System

System Configuration

Virtual Machine Name: Virtual Machine Windows Install

Allocated Resources:

- * RAM: 8 GB
- * CPU Cores: 2
- * Virtual Disk: 64 GB

Step 1: Windows 11 Installation

Description:

Windows 11 was successfully installed and booted within the virtual machine. The operating system reached the desktop environment without errors.

Step 2: System Verification

Description: System Information was reviewed to confirm the operating system version, processor configuration, BIOS mode, and hardware detection.

Step 3: Device Specification

Description:

Device specifications were reviewed to verify processor allocation, installed memory, and operating system architecture.

Step 4: Disk Management Verification

Description:

Disk Management was used to verify partition creation and storage allocation. Windows correctly recognized the virtual hard disk and system partitions.

Step 5: VirtualBox Guest Additions

Description:

Oracle VirtualBox Guest Additions were installed to improve display support, mouse integration, and overall virtual machine usability.

Step 6: Network Connectivity Verification

Description:

The ipconfig command was executed to verify successful network connectivity. The virtual machine received an IPv4 address and gateway configuration through VirtualBox networking.

Skills Demonstrated

- Virtualization
- Windows 11 Deployment
- System Configuration
- Storage Management
- Network Verification
- Technical Documentation
- Basic Troubleshooting

Conclusion

The Windows 11 virtual machine was successfully deployed and configured within Oracle VirtualBox. System functionality, networking, storage configuration, and VirtualBox integration were verified through testing and documentation.
